

Tim Ross  
Grain Trade Australia  
17 March 2021

Dear Tim,

**Re: Standards Change Submission**

Hi Tim,

GrainCorp seek to propose a Trading Standards amendment for inclusion in the Grain Trade Australia Trading Standards for the upcoming 2021/22 season. These suggested changes are in acknowledgement of:

- GrainCorp acknowledge that the review of Defects specifications in SFW1 is approved by GTA, pending no further comment from industry, for introduction into the 2021/22 season Grain Trading Standards. In recognition of this, GrainCorp propose these changes are also aligned in the recently released (2020/21) SFWR Grade

GrainCorp propose the following GTA Standards amendments:

- SFWR Specification changes suggested as:
  - STAN max limit to be changed to 50% per 300 grain count
  - GREE max limit to be changed to No Limit
  - DAMI max limit to be changed to 4% per 300 grain count
  - ARTD max limit to be changed to No Limit
  - FFUN max limit to be changed to 40 per ½ Litre above the screen
  - SEVE max limit to be changed to 5 per ½ Litre above the screen

I look forward to the committee's consideration and wider consultation.

Your Sincerely,

Jason Shanley  
Quality Assurance Manager
