GTA TRAINING AND DEVELOPMENT PROGRAM

GRAIN TRADING STANDARDS

GTA Courses are offered to GTA Members and non-Members and targeted at all levels of industry experience

- Australian industry perspectives
- Designed specifically for Australian industry
- Local knowledge/global perspective

The Grain Trade Standards Workshop has been **designed for grain trade classification staff, grain merchant and grain producers who receive, assess and manage grain storage.** The program is designed for **personnel responsible for the operation of receival sites and industry participants who require an understanding of classification and segregation of grain**. The program provides a detailed understanding of the trade requirements for **on-farm storage and handling to meet trade requirements for domestic and international markets**. The workshop runs for two days, providing participants training in:

- The application of relevant Trading Standards for cereal grain, oilseeds & pulses
- The correct procedures for operating a receival site/storage facility
- The grain classification process; weighbridge and documentation activities and information required to safely receive and store grain.
- The correct use of equipment and assessment techniques

- Opportunity to network
- Delivered by experienced industry experts
- Face to face and webinar delivery

Presenter: Gerard McMullen

Gerard has been **involved in the development of grain trading standards, creation and implementation of QA, food safety and research programs and management of grain quality** along the Australian and global grain supply chain.

He has participated (or currently sits) **on a number of industry & Government committees**, including the GTA Standards Committee.

Gerard has professional qualifications as a BA of Agricultural Science and offers consultancy services and advice (McMullen Consulting Pty Ltd) in the development and implementation of systems relating to grain quality, food safety and identity preservation.
